

# 5 Ways to Ensure Your Employees Are Connected & Productive

# Meet Your Presenters & Hosts

---

- **Lance Steckel**  
VP of Sales Operations at LOGIX Fiber Networks
- **Josh Foshee**  
Sales Engineering Manager at LOGIX Fiber Networks

# Agenda

- How cloud services enhance productivity
- The benefits of using a data center
- How Hosted PBX and VoIP support a remote team
- Unified Communication tools that enable remote workers
- How to configure a virtual private network (VPN)
- Customer success stories
- Q&A

# Cloud Services

- Take advantage of leading cloud services such as Amazon Web Services, Microsoft Azure and Google.
- Enable operation of mission-critical applications.
- Employees have access to the same applications and tools, whether they're sitting at their desks or working at home.
- Increase productivity by 40% and efficiency by 47% ([Trakvia](#)).

# Data Centers

---

- Efficient infrastructure with fault-tolerant and redundant power.
- Physical and biometric security.
- 24/7 year-round remote hands support.
- Flexible, scalable storage options.
- Multiple bandwidth options.
- Reduce CAPEX and OPEX by average of 40% ([Cloud Technology Partners](#)).

# Hosted PBX & Business VoIP Phone

---

- Eliminate the capital expense of purchasing a phone system and maintenance contracts.
- Remote employees can answer calls on their business or personal computer, mobile phone or tablet.
- Business calls are instantly forwarded to employees regardless of where they are.
- Provides features such as call transfer, call hold, call-park, call waiting, auto- attendant, voicemail and soft client application.
- Create a secure connection between web browsers and servers using Transport Layer Security (TLS) 1.2 protocol to deter intruders.
- Cost savings range from 30-50% over traditional business phone systems ([Tech.co](#)).

# Unified Communications

- Everyone is working off the same platform, has access to the same set of tools and can communicate quickly and efficiently.
- Works across devices so employees can work remotely on their desktop computer, laptop, tablet or cellphone.
- Quick and easy deployment for companies of all sizes.
- Improve productivity by 52% business efficiency by 45% and increase operating profits by 25% ([Eastern Management Group](#)).

# Virtual Private Network (VPN)

- Remote employees can access company networks or use remote access software to connect to their desktop at the office.
- Secure tunnel between an employee's device and business networks.
- Encrypts data so it is protected against interception by unauthorized parties.
- Employees' devices are invisible to other users if they are using public Wi-Fi.
- Extra protection since 82% of employees do not follow data privacy policies ([thebestvpn.com](http://thebestvpn.com)).

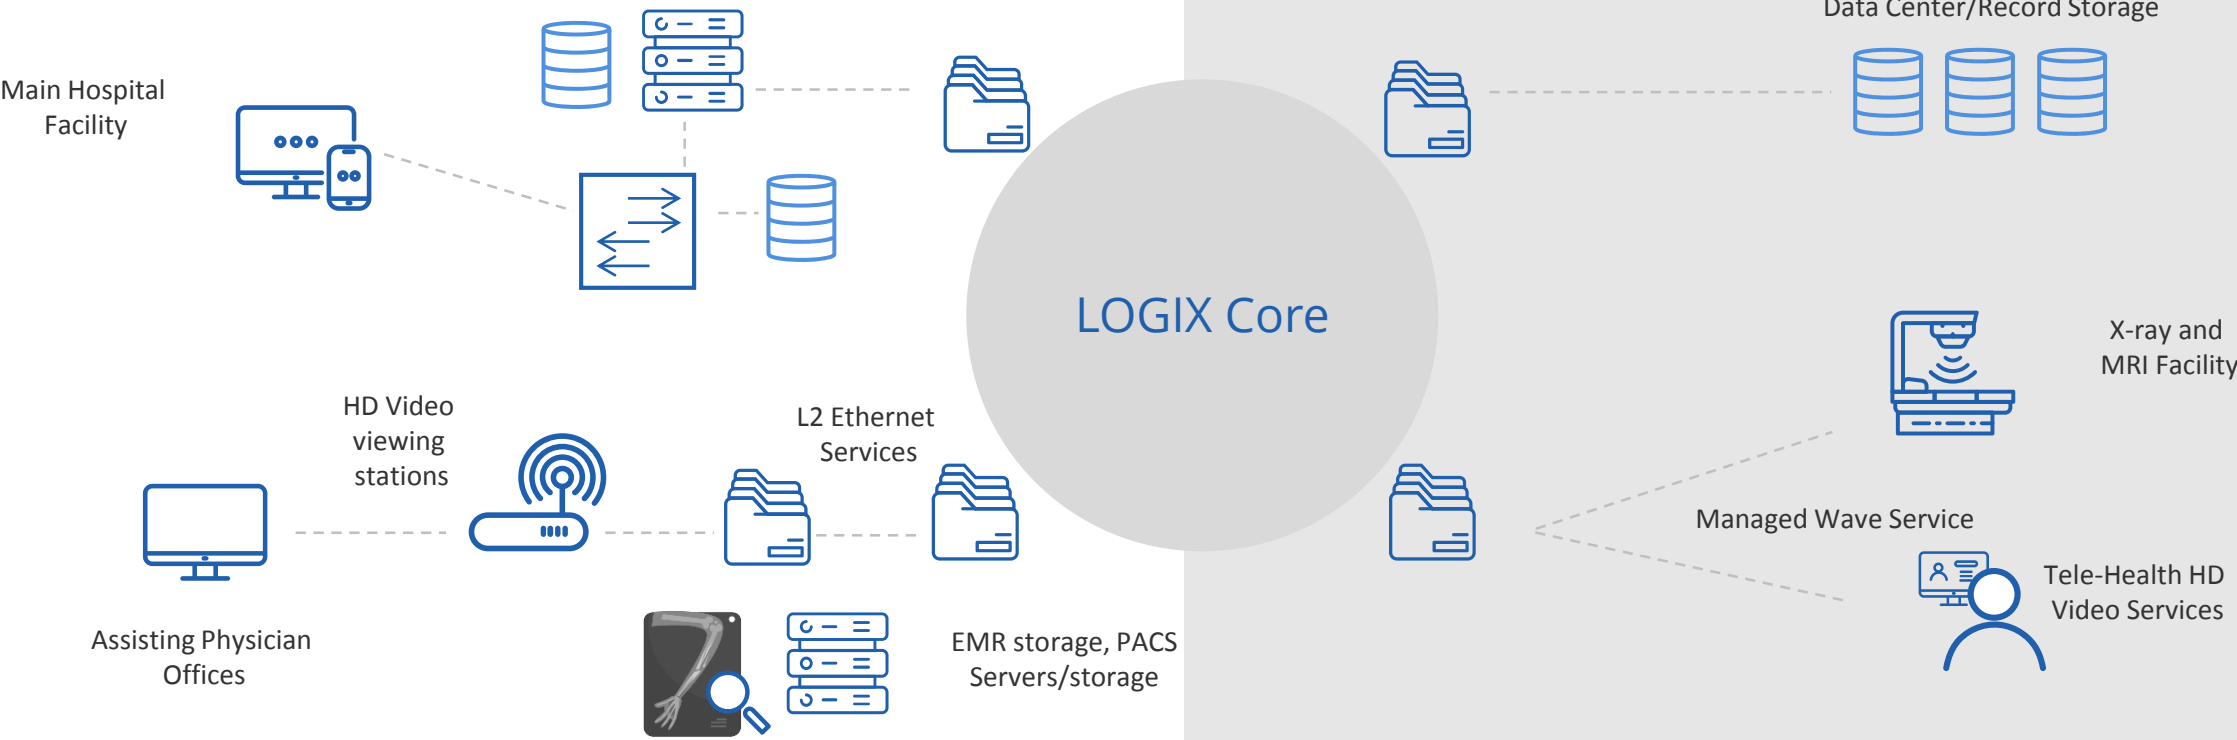

# Case Study Review

# Case Study: Medical Industry

- Local hospital that moved infrastructure to a LOGIX Data Center.
- Allow them to store everything in a controlled environment that is secure with redundant systems.
- Remote physician offices, hospitals, and facilities can access records and information to stay connected and productive.

# Q & A

# How to Get in Touch

---
