

Configuring LOGIX-HOSTED Microsoft Exchange on your Android Device

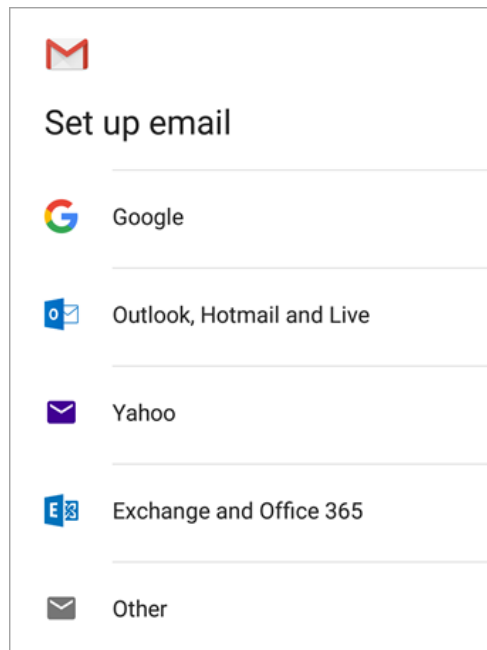

Who needs this User Guide?

Customers who are using an Android Device and would like to setup their mail on the Device.

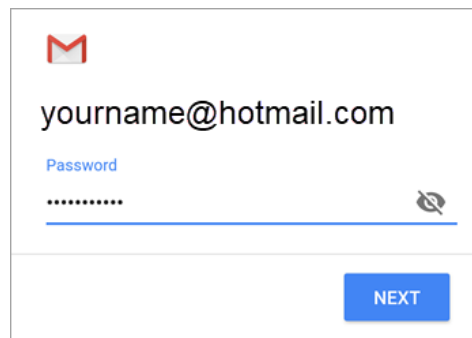

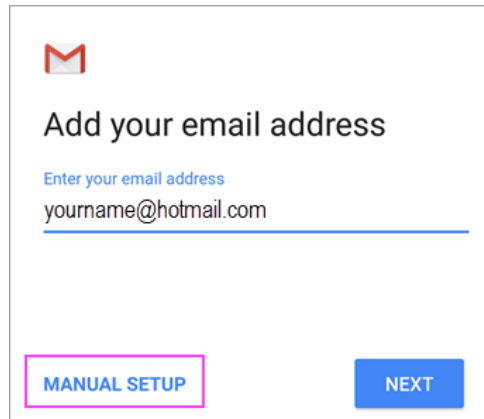

Why use this User Guide?

Customers who are using an Android device can utilize this procedure to setup Mail services on their Android device.

1. Open the Gmail app. Go to **Settings > Add account > Exchange and Office 365**.

2. Enter your full email address, such as *yourname@hotmail.com* and then Enter your password and Tap Next.

Important: If you get a security error, close the Gmail app and then go through the steps again.

3. If you're prompted to enter settings, use these for the options available:

Incoming Server Settings

- **Domain\Username**
Make sure your full email address appears. For example, *yourname@outlook.com*.
- **Password**
Use the password that you use to access your email.
- **Server**
 - Use **mail.logixcloud.com** IMAP accounts.
- **Port**
 - Use **465**
- **Security type**
Select **SSL/TLS** or make sure the **Use secure connection (SSL)** checkbox is checked, then tap **Next**.

Outgoing SMTP Server Settings

- **SMTP Server**
 - Use **mail.logixcloud.com**
- **Security Type**
Choose **TLS**.

- **Port Number**

Enter **587**. Tap **Next**.

4. Follow any prompts you may get, including security permissions and setting a display name.
5. You're now ready to use your email in the Android Gmail app!
