LOGIX
FIBER NETWORKS

Business Wavelength
Built for Business
Efficiently and securely transfer data between locations and data center facilities
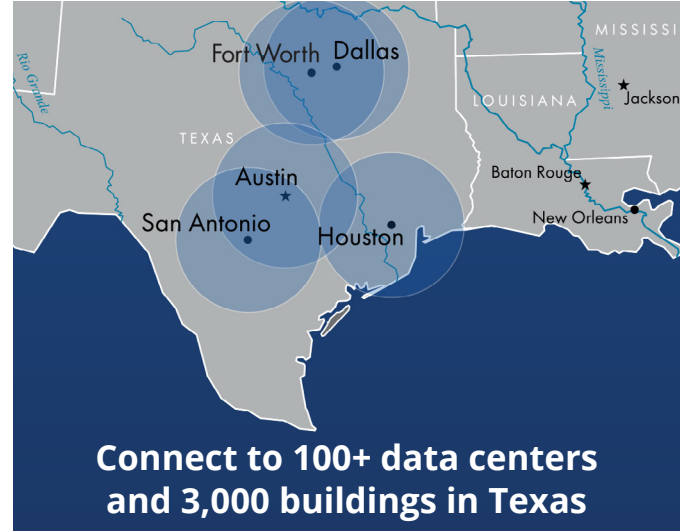

Private, fully dedicated connectivity at speeds up to 100 GB

LOGIX's Business Wavelength eliminates the need to build, manage and maintain a high-capacity dark fiber network and provides a robust, high-bandwidth solution with:

✔ Predictable performance regardless of application or protocol.

✔ High security from a private, fully dedicated network architecture.

✔ High-bandwidth connectivity between distant locations.

Connect to 100+ data centers and 3,000 buildings in Texas

Business Wavelength

- **Scalability:** Choose from a full range of speed up to 100 GB to scale bandwidth as business needs evolve.
- **Network efficiency**: Dense Wave Division Multiplexing (DWDM) technology enables maximum bandwidth for the lowest cost.
- **Network architecture options**: Load sharing with multiple connections and diverse routes to ensure business continuity.
- **Solution flexibility**: Leverage wavelength and ethernet services for a complete private network solution regardless of the application and bandwidth requirements.

The LOGIX Advantage

- Access to over 100 data centers and 3,000 buildings in Texas.
- Diversity options for redundancy and business continuity.
- Professional support and consultative design on low-latency routes.
- Exceptional Texas-based customer service and 24/7 year-round network monitoring.
- Multiple fiber rings throughout Texas providing network redundancy and 99.999% availability.
- Network quality-of-service performance service-level agreement guarantee.
